Trend Over Time

CTR & Conversion Rate by Month

CPC and CPA by Month

Total Clicks by Month and Channel									
-----------------------------------	--	--	--	--	--	--	--	--	--

Key Insights

- **The account earned \$7.75 back for every \$1 spent**, but only 1% of people who saw an ad clicked it, and only 4% of clicks turned into a sale.
- **Spend stayed steady all year**, June was the best month for returns, and one campaign "Retargeting to Cart Abandoners" brought in over \$4.3M by itself.
- **Two-thirds of the budget went to Conversion and Retention campaigns**, and within that group, Mid-Year Retargeting Push gave strong returns on a small budget.
- **Loyalty Member Appreciation was the best performing campaign**, and Email Marketing was the best performing channel, while LinkedIn Ads was the only one losing money.
- **Email and Google Search turn the most visitors into buyers**, Google Search also gets the most clicks, and LinkedIn and Google Display perform weakest on both.
- **Most channels cost and perform similarly**, but Email is far more efficient and LinkedIn is far more expensive, while customers aged 55–64 buy slightly more often than other ages.
- **Marketing spend is split almost equally between men and women**, and returning customers are more profitable than new customers.
- **Customers aged 55–64 give the best return and ages 25–34 give the lowest**, while more than half the budget goes toward mobile ads.
- **All six countries perform about the same**, with Canada and Germany slightly ahead, but desktop users buy more often than mobile or tablet users.
- **The United States brings in far more revenue than any other country**, and how often people buy changes more month to month than how often they click.
- **Cost per click and cost per sale both jump in late summer**, and Facebook Ads brings in more traffic than any other channel all year.

Recommendations

- **Shift some budget from LinkedIn Ads and Google Display into Email Marketing**, since Email costs far less per sale and brings in the strongest returns by a wide margin.
- **Invest more in retargeting and retention campaigns**, like Retargeting to Cart Abandoners and Mid-Year Retargeting Push, since both are already proving highly profitable.
- **Reduce or pause spend on LinkedIn Ads** until its cost per sale improves, since it is currently the only channel losing money.
- **Focus more attention on getting people to click on ads**, not just showing more ads, since the biggest drop-off happens right at that first step.
- **Prioritize marketing to returning customers**, such as loyalty offers and repeat-purchase campaigns, since they consistently deliver a higher return than new customers.
- **Put slightly more budget toward customers aged 45 and above**, especially the 55–64 age group, since they buy more often and generate stronger returns than younger age groups.
- **Review the desktop buying experience and apply similar improvements to mobile**, since desktop users convert to sales more often even though mobile brings in most of the traffic.
- **Continue running Awareness campaigns at a smaller, supporting budget level**, since they are not designed to drive direct sales but still help build visibility for future campaigns.
- **Keep spend fairly even across all six countries**, since performance is consistent across regions and no market currently needs urgent attention.
- **Plan extra budget or inventory around late summer**, since cost per click and cost per sale both rise during that period, likely due to increased competition or seasonal demand.
